MOTIVATION LETTER TEMPLATE FOR DREAM (MANDATORY FORM)

Instructions

In order to show your motivation for DREAM, please fill out this motivation form (mandatory).

Use font size 11 or 12. **You do not need to address anyone** with an introductory phrase such as "To whom it may concern" or "Dear…", simply answer the requested items in the dedicated text boxes.

1) Personal introduction (300-500 characters, spaces not included).

As a competent Senior Electrical Engineer with a proven track record in power systems, I bring over 2 years of expertise in driving innovative solutions to complex power system challenges. My extensive knowledge in power systems, and power electronics for renewable energy systems, paired with my strong leadership, research, and project management skills, enables me to confidently tackle the evolving demands of renewable-based power systems. I am dedicated to advancing the transition towards a more sustainable and efficient power systems future.

2) Recall of the undergraduate curriculum and highlight links to the European Master in Dynamics of Renewables-based Power Systems (DREAM) programme (300-500 characters, spaces not included).

My power-focused undergraduate education honed my skills for the European Master in Dynamics of Renewable-based Power Systems. I mastered subjects such as; Power Transmission Distribution and Utilization, Power System Analysis and Design, Power System Operation and Control, and Renewable Energy Systems gaining hands-on experience and emphasizing practical solutions for advanced control and innovative power systems design, fortifying my knowledge in modern renewable-dominated systems. All of these courses align with the DREAM program, making me a formidable candidate.

3) State in short why you want to apply for DREAM. (300-500 characters, spaces not included).

I see the DREAM program as the optimum path to fulfilling my career objectives due to its exclusive opportunity to master renewable-based power systems. The program equips me with top-notch knowledge to develop functional, safe, and innovative power generation from renewable energy sources, energy storage systems, and smart grids with a sustainable and eco-friendly approach. Furthermore, I will hone my skills through hands-on experience in integrating renewables into the electrical grid through the internship program, broadening my international networks and profile.

4) Develop your strongest qualifications, past experiences and qualities that will help you to succeed in DREAM (500-1000 characters, spaces not included).

Upon completion of my program, I aim to immediately embark on Ph.D. studies, deepening my research expertise in renewable-based power systems with a focus on developing innovative solutions for smart power systems and contributing to sustainable development. I envision a career in industry after my Ph.D., collaborating with like-minded individuals to drive innovations in Power Systems and Smart Grids while also transferring this knowledge to support Pakistan's energy transition through renewable integration and smart grid development. I aspire to bring about a paradigm shift in the efficiency and environmental impact of power systems with the mastery of hands-on experience and skills acquired.

5) **Develop what will be your career plans after getting your master's degree (300-500 characters, spaces not included).**

Upon completion of my program, I aim to immediately embark on Ph.D. studies, deepening my research expertise in renewable-based power systems with a focus on developing innovative solutions for smart power systems and contributing to sustainable development. I will envision a career in industry after my Ph.D., collaborating with like-minded individuals to drive innovations in Power Systems and Smart Grids. I aspire to bring about a paradigm shift in the efficiency and environmental impact of power systems with the mastery of hands-on experience and skills acquired.
